### **LORD VICTOR NIGHT SAFE WITH DRAWER TRAP FACING FRONT**

#### **BODY**

The Lord Victor safe body has an overall thickness of 4.13" (105mm) approximately incorporating the LORD specially formulated barrier material "Titanite", encased within the steel walls protecting all sides of the safe body with a single homogenous cast unit of consistent strength and protective qualities. "Titanite" is the proven barrier material that gives very high resistance to mechanical as well as oxy-acetylene attacks

#### **DOOR**

The overall door thickness measures an impressive 5.66" (144mm) approximately incorporating "Titanite" encased between heavy steel press formed plates with the lockcase forming an integral part of the door structure. The protective thickness of 2.56" (65mm) is further enhanced with reinforcement of anti-penetration tangbars and drill resistant plates to protect the locks.

#### **BOLTWORK**

A series of heavy-duty 1.5" (38mm) diameter steel bolts secure the safe door with reinforced lockcase within the safe body. Long throw bolts lock directly into the recess of the body for uniform strength between door & body. Even when the hinges are cut off or under an explosive attack, the door remains securely locked into the body.

#### **LOCKING**

The standard locking system is secured by a 3-wheel combination lock capable of one million codes and one keylock.

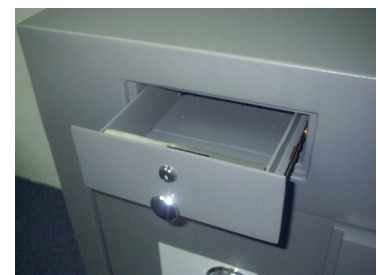

#### **AUTOMATIC RELOCKING DEVICE**

The Lord Deadlocking device automatically seizes all bolts if forcible attacks are made, especially by explosive charges or drills by positively jamming up the bolt-throwing action.

#### **SPECIFICATION**

The safe consists of two sections:

1. Upper Section
  - a. With a drawer to receive monies/envelopes/wallets etc
  - b. A anti-fish device prevents "fishing" of deposited items though the drawer
  - c. Drawer is secured by a keylock

### 2. Lower Section

- a. Similar to that of Lord Internationally rated Victor series fire and burglary resistant security safe secured by one combination lock and one high security bilock keylock

### TEST REPORTS

Lord safes are designed and manufactured to known international standards which include UL (Underwriters Laboratories Inc USA), SIRIM, and JIS (Japanese Industrial Standard) standards. Furthermore, Lord safes are fully rated by the Dutch Safe Rating Committee (Stichting Kwaliteitsbeoordeling Brandkasten) and European Safe Rating Committee. Accordingly, each series of Lord safes carry an insurance rating for value of content for insurance purposes.

The Victor series has successfully passed the following tests:

1. Hydraulic Jack attack test by SIRIM Malaysia with a 3-ton hydraulic jack.

### DIMENSIONS OF VICTOR SAFES WITH DRAWER TRAP

Model	EXTERNAL (mm)			INTERNAL (mm)			Weight (kg)
	H	W	D	H	W	CLEAR DEPTH	
VICTOR 1	817	565	587	457	355	324	456
VICTOR 2	1020	616	665	660	406	400	699
VICTOR 3	1223	667	742	863	457	476	882
VICTOR 4	1528	743	855	1168	533	590	1400
VICTOR 5	1808	743	855	1448	533	590	1650
